Torque Wrench

T-Torker®

For repetitive jobs requiring identical torque settings, our T-TM provides an audible overrun when the factory preset torque is reached. These convenient wrenches offer fast, easy, one handed tightening in the right hand direction. The T shape creates effective leverage. Flanged reversing collar disengages the tool for conventional backing off and loosening. All mechanisms are permanently sealed in die-cast handle and lubricated for the life of the tool. Available in Utility (5/16" hex), Industrial (1/4" male drive) and ratchet only models.

T-T Model has 5/16" hex forged into the shaft.
Set to 60 or 80 lb-in for US Style no hub soil pipe installations.
Ergonomic handle makes work more comfortable.

T-M Model has 1/4" square male drive.
Factory set from 5 to 80 lb-in per customer specification. Settings should be in 5 lb-in increments. Customized shafts available.
No torque also available.
