

PRESS RELEASE

Lowell's Engineers Use Quality Control Optical Measurement Machine to Produce High Quality Tools in the USA

WEST BOYLSTON, MA - Lowell Corporation prioritizes the integration of cutting-edge technologies into their manufacturing processes. Lowell's dedicated quality control team relies on the precision of the Quick Vision Elf machine by Mitutoyo to guarantee dimensional accuracy in both prototypes and final products. By utilizing these state-of-the-art optical measurement machines, Lowell ensures the utmost precision in both their design and final products.

Quick Vision ELF Optical Measurement Machine

Lowell's Custom Quality Control Optical Measurement Fixtures

The Quick Vision ELF is a cutting-edge, automated vision measurement system with a sleek and ergonomic design. By incorporating a state-of-the-art optical measurement machine like this, Lowell is able to enhance lead times for our clients and assist the engineering team in ensuring exceptional accuracy and precision during assembly and final quality inspections. Lowell Corporation continuously implements new technologies to elevate various aspects of production processes to further enhance their high quality 100% Made in the USA products.
