## Lowell Corporation Introduced New Robotic Arm to Revolutionize Manufacturing Process

WEST BOYLSTON, MA - Lowell Corporation is thrilled to introduce their newest groundbreaking innovation: the OB7 Stretch Robotic Arm. This cutting-edge technology is poised to revolutionize manufacturing as we know it. With its advanced "touch to learn" technology, the OB7 Stretch Robotic Arm eliminates the need for complicated and time consuming programming.

**OB7 Stretch In Action Moving Sockets From Fixture Table**

**OB7 Stretch Equipped with Versatile 7-Axis Arm**

Furthermore, OB7's collaborative robot arm with 7 moving joints allows it to reach around objects and obstacles in the work area, something that robots with only 6 joints cannot achieve. Each of the 7 joints can rotate 360 degrees in both directions, giving the OB7 exceptional flexibility and versatility. It can seamlessly integrate into almost any existing production environment without the need for reorganization or retooling. Visit Lowell Corporation's YouTube channel to watch the OB7 in action at their West Boylston warehouse.
